Benefect
disinfectant spray

There is a new force to be reckoned with in the realm of germ control. Both Health Canada and Environment Canada have recently approved a revolutionary all-natural hospital-grade disinfectant. "Benefect" disinfectant is the only 100% botanical, hospital-grade disinfectant in North America to be approved by both these governing agencies. It does not require any warning labels, and actually has a pH level equal to water! And **Paul Davis Systems** is the first insurance restoration company to introduce this product to you.

As with the VAPORTEK line of products, (for which **Paul Davis Systems** was the exclusive distributor when it was originally launched in Canada), **Benefect** uses a combination of non-toxic and U.S.-approved food grade ingredients. These ingredients are all derived from plant sources in the form of essential oils. This mixture of oils is then stabilized and accelerated to provide you with a "plant immunity system" in a bottle. And in case you are not quite convinced that this product is non-toxic, our supplier proved his point by spraying **Benefect** in his mouth!

After 4 years of scientific research, the Burlington-based makers of **Benefect**, SENSIBLE LIFE PRODUCTS, have received two Health Canada approvals for DIN and PCP. As well, **Benefect** has solidified its place atop Environment Canada's Environmental Choice Program (ECP) by being the only approved hospital-grade disinfectant accepted into this program! The ECP is a coveted program where environmentally and socially responsible products are recognized and praised as being preferable to those products less "green friendly".

What does this all mean to you?

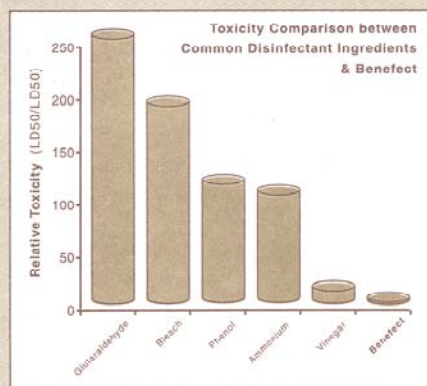

Customer Safety: You now have access to a safe, non-toxic and approved disinfectant for property losses. It means a safer option is available to your customers who may have concerns about synthetic chemicals due to:

- children or elderly people in the home;
- pets;
- specific allergies or respiratory problems;
- recent surgery;
- or other chemical sensitivities (which affect approx. 10-15% of the population).

Peace of Mind: You have government-approved peace of mind for your clients—they can be confident that bacteria, fungus and moulds are being safely and effectively removed, and without products that can sometimes be more toxic than the germs themselves!

QUICK FACTS:

Kills 99.9999% of disease-causing bacteria
Active Ingredient: Thymol (present as a component of Thyme oil)
pH: 7.0 (neutral, equal to water)
Patent Pending: 81 countries

Reduce your claims costs: Since **Benefect** is non-toxic, this may reduce your claims costs where additional living expenses are required for your clients with chemical sensitivities or special needs. They may actually be able to stay at home during the cleaning process as the chemicals are not threatening to them.

Efficient germ control: You are also assured of efficient germ control, as it kills over 99.9999% of disease-causing germs. The non-corrosive spray dries almost instantly with no rinsing or wiping required.

Safer for our crews: Finally, our crews themselves are now operating in safer environments. Because **Benefect** is food-grade, its application does not require the use of rubber boots, protective eyewear, aprons or even gloves!

Another industry first by PDS: **Benefect** is currently used by Sears Indoor Clear Air and The Bay Home Services, and can be found in over 11 countries at this time. **Paul Davis Systems** is the first to introduce this product to the restoration industry, as we continue to search for smarter and safer ways to service our insurance customers.

If you have further questions about **Benefect, or wish to purchase this product for your own use, please contact:**
